BUSINESS SERVICES

Energy Solutions: Business Rebate Program

Burbank Water and Power (BWP) is proud to offer rebates to Burbank businesses under our Energy Solutions Program. Energy Solutions is an umbrella program offering financial assistance for energy-efficient projects. Let BWP help you reduce your energy costs with this program! For more information on the Energy Solutions Program, please call 818-238-3638. Click [here](#) to download the two-page business rebate application and the four page W-9 tax forms.

On December 19, 2006 the Burbank City Council approved the following methodologies for how Energy Solution rebates will be determined, effective immediately. In all cases, the incentive provided will not exceed 50% of the installed cost of the measure. Additionally, the annual customer rebate total may not exceed \$100,000.

- **Cool Roofing** : In order to receive a rebate for this measure each of the following three conditions must be true:
 1. The space directly below the reroof area is air conditioned.
 2. The reroof is NOT required to comply with Title 24 cool roof requirements. Please refer to this document to determine if your roofing project must comply with Title 24: [CEC Blueprint Doc – Cool Roofing](#)
 3. The cool roofing materials to be used will comply with the applicable Title 24 cool roof standards and tests.

If all three conditions are met, the rebate amount is calculated using either demand or energy savings, whichever is higher, using the tables below. BWP will pay the greater of \$0.05 per kilowatt-hour saved or \$150 per kilowatt demand saved, both over half the expected lifetime of the installation. Rebates are not to exceed 50% of the project cost.

Cool Roof Demand (kW) Savings per 1,000 Square Feet			
Built before 1978	Built between 1978 and 1992	Built between 1993 and 2001	Built between 2002 and 2005
.139	.096	.106	.086
Cool Roof Annual Energy (kWh) Savings per 1,000 Square Feet			
Built before 1978	Built between 1978 and 1992	Built between 1993 and 2001	Built between 2002 and 2005
298	197	204	166

- **Miscellaneous Energy-Saving Retrofits** : The vast majority of business retrofit projects will fall into the categories listed above. For those energy-saving projects that don't fall neatly into one of the above categories, yet will meet the criteria of this program, BWP will pay the greater of \$0.05 per kilowatt-hour saved or \$150 per kilowatt demand saved, both over half the expected lifetime of the installation. Rebates not to exceed 50% of the project cost.

IMPORANT REBATE INFORMATION:

- In all cases, the incentive provided will not exceed 50% of the installed cost of the measure. Additionally, the annual customer rebate totals may not exceed \$100,000.
- Complete rebate applications, [including verified energy savings calculations](#), must be submitted within four months after the project completion date in order to be eligible for rebate consideration.
- After project completion, a final inspection and verification of the installation will be required prior to issuing a final rebate check.
- Rebates will be accommodated on a first come basis and limited annually to available funding of commercial programs.
- The Energy Solutions program is for retrofit projects only.
- All equipment must be new. Used, rebuilt, or refurbished equipment is not eligible.
- Significant energy savings are required to qualify for this program.
- This program shall at all times be subject to change or termination without notice.

Are you looking for more energy efficiency rebate incentives?

As a Burbank business, you are also a Southern California Gas Company customer eligible to participate in their incentive programs. For more information on The Gas Company's business energy efficiency rebate programs please visit:
