

Energy Seal Coatings

Acrylic Coatings for Roof and Wall Applications

Air Barrier System

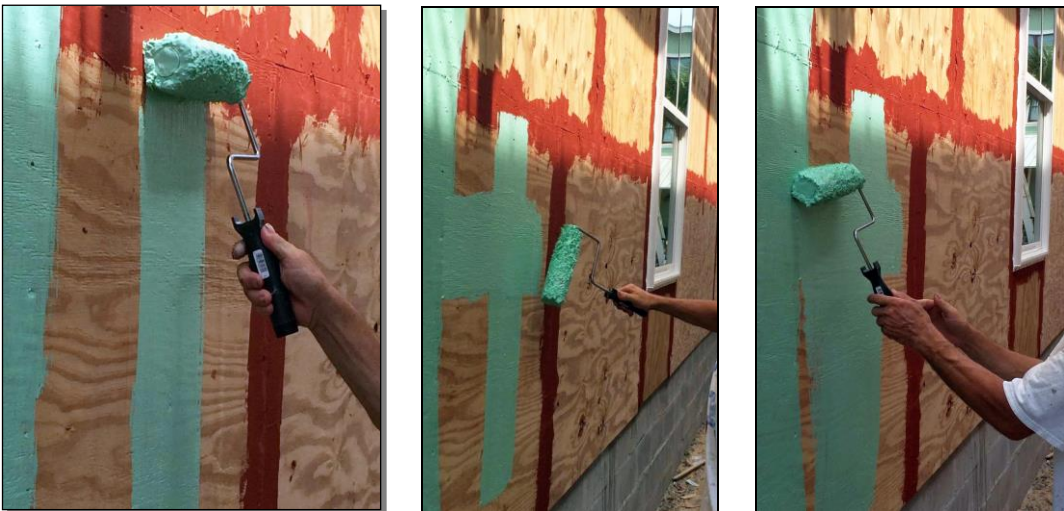

“Red-lined”™ with Acu-AirShield PPG SKU – ACS00202/EA

Acu-AirShield is a vapor permeable component in the Energy Seal Coatings Air Barrier system. It has been developed to prevent the movement of air and water through a building envelope. It is a fiber reinforced acrylic flashing grade caulk applied to seams, joints, counter flashing, cracks, gaps and around rough openings. It can also be used to seal around penetrations and countersunk fasteners.

“Greened-in”™ with Acu-WeatherShield PPG SKU – ACS00203/EA

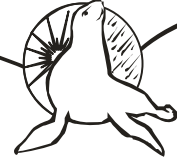

Acu-WeatherShield is a water-based liquid applied elastomeric vapor permeable membrane. It is an acrylic-based coating that dries to form a “rubber-like” protective membrane that will resist air leakage and water penetration when applied to a variety of exterior sheathing including; OSB, plywood, glass mat gypsum, concrete and concrete masonry units.

Energy Seal Coatings

Acrylic Coatings for Roof and Wall Applications

Air Barrier System

Completed Air Barrier System

Energy Seal Coatings liquid air barrier system is complete when the Acu-WeatherShield completely covers the Acu-AirShield. The red stripes of the Acu-AirShield should not be seen through the green of the Acu-WeatherShield.

PPG SKU's

Acu-AirShield – ACS00202/EA

A vapor permeable seam sealer designed to prevent the movement of air and water through a building envelope.

Acu-WeatherShield – ACS00203/EA

A vapor permeable “rubber-like” protective membrane that protect building sheathing from air leakage and water damage.
